14. (currently amended) A therapeutic method for preventing or treating appropriative less pathological condition or exemptom in a mammal which is associated with abnormal of neuronal activity of a metabotropic glutamate receptor, comprising administering to a mammal in cells and less need of such therapy, an effective amount of a compound of claim 1.

15. (original) The method of claim 14 wherein the condition is, or the symptom is

associated with epilepsy, cerebral deficits subsequent to cardiac bypass surgery and

grafting, stroke, cerebral ischemia, pain, spinal cord injury, head trauma, perinatal

hypoxia, cardiac arrest and hypoglycemic damage, anxiety, neurodegenerative diseases,

Huntington's Chorea, AIDS induced dementia, ocular damage, retinopathy, cognitive

disorders, Parkinson's Disease, or Multiple Sclerosis.

FXX

16. (original) The method of claim 14 wherein the condition results in progressive loss of neuronal cells and/or cellular function.

EXA

17. (original) The method of claim 14 wherein the condition is, or the symptom is associated with stroke.

EXA)

18. (original) The method of claim 14 wherein the condition is, or the symptom is associated with Alzheimer's disease.

EXA

19. (currently amended) A therapeutic method to treat or manage an addiction comprising administering an effective amount of a compound of claim 1 to a mammal in need of such therapy. The method of claim 14, wherein the condition or symptom is associated with morphine dependence.

EX.A

20. (currently amended) The compound of claim 1 comprising a detectable label, wherein said detectable label is selected from the group consisting of ²H, ³H, ¹¹C, ¹³C, ¹⁴C, ¹³N, ¹⁵N, and ¹⁸O.
